

Enhancing Quality for Patients. Advancing the Delivery of Care.

Through our growing participation in the GIQuIC registry, together we are improving colonoscopy care for all.

AMSURG thanks our physician partners for your commitment to quality and your support of GIQuIC, the Gastroenterology Quality Improvement Consortium. AMSURG partners began utilizing the registry in 2013 and our impact is significant — more than two million colonoscopy reports in the GIQuIC registry, accounting for nearly 25 percent of entrants. Today, our participation includes more than 120 ambulatory surgery centers and 1,000+ physicians.

AMSURG Key Trends and Learnings

With many participating physicians across the organization, we have amassed a significant database. Through GIQuIC, AMSURG's ambulatory surgery centers are continually monitoring key indicators, comparing rates to others in the GIQuIC registry and demonstrating quality against industry standards and benchmarks. Overall, we are surpassing industry standards in quality.

Performing Above National Benchmarks

“As one of the first centers to use GIQuIC, we have been able to monitor and improve quality over time. We have seen continuous improvement in our quality, making a difference in our patient outcomes and lives.”

— **Paul Brown, M.D.**,
Louisville Endoscopy Center, Louisville, Kentucky

Quality Improves Over Time with GIQuIC

Of the 20 original AMSURG partner centers that joined the registry in 2014, all are continually reviewing the data, adjusting protocols, and seeing consistent gains in quality. This continuous improvement confirms our original hypothesis: when we track and focus on quality, we improve outcomes.

Withdrawal Time Directly Impacts Adenoma Detection Rate

Adenoma Detection Rate is significantly impacted by Withdrawal Time. Increasing length of Withdrawal Times are leading to higher ADR:
